Product Features

- Provides wide variety of data source types, including PRBS, Data List, Pattern, All0 and All1
- The modulation mode includes QAM, ASK, PSK, FSK, MSK and User
- Provides rectangular filter, raised cosine filter, root raised cosine filter, and Gaussian filter
- Diverse waveform display modes: $i(t)/q(t)$, FFT Magnitude and Constellation; waveform zooming in or out function
- Supports three kinds of ARB file download methods: use Ultra IQ Station software to edit and download, load the ARB file edited by other software using Ultra IQ Station software, program by recalling function to edit and download
- Supplement and save the external ARB data
- Ease-to-use graphical user interface
- IQ modulation which supports internal and external modulation modes and IQ baseband output

I/Q Signal Generation and Download (Three Methods)

- ➡ The ARB file is edited and downloaded into DSG3000 by the Ultra IQ Station PC software.
- ➡ The ARB file edited by other software (e.g. MATLAB, LabVIEW, MathType and so on) is loaded into DSG3000 using the Ultra IQ Station PC software.
- ➡ The ARB file is generated and downloaded into DSG3000 under Visual C++, Visual C# and LabVIEW environment on the basis of I/Q dynamic link library.
