

# HDM3065 Series True-RMS Digital Multimeter 6 ½ digit

6 1/2 bit resolution; 30 k/s high-speed sampling frequency, which makes it easy to capture transient signals; front and back multimeter input, measure a key switch; statistic analysis, histogram and run chart display function; Double display measurement function, display 2 kinds of signal parameters at the same time; 3A/10A current range; 4.3 inch 64K LCD; 0.1uV resolution, easy to use, parameters can be setted easily; 13 kinds of measure functions: DC Voltage, AC Voltage, DC current, AC current, 2 line resistance, 4 line resistance, capacitance, diode, connectivity, frequency, period, temperature.

- Real 6 1/2 bit reading resolution;
- Front and back 2 sets of multimeter input interface, measure can a key switch;
- Up to 30, 000 rdgs/s reading;
- Graph display function, trend drawing function to paperless record testing data, statistic information and histogram;
- Double display measurement function, display 2 kinds of signal parameters at the same time;
- True RMS AC voltage and AC current measure;
- 0.1μV resolution, easy to use, parameters can be setted easily;
- Support dual display, Chinese and English menu;
- Built in help system, convenient access to information;
- 13 kinds of measure functions: DC Voltage, AC Voltage, DC current, AC current, 2 line resistance, 4 line resistance, capacitance, diode, connectivity, frequency, period, current range can be 10A;
- 4.3 inch 64K LCD;
- Safety standards: CAT II 300 V;
- Support standard SCPI Remote control command, upper computer software, Compatible with the latest mainstream multimeter command set;
- Configuration interface: USB Device, USB Host, LAN (HDM3065B), GPIB (HDM3065H)

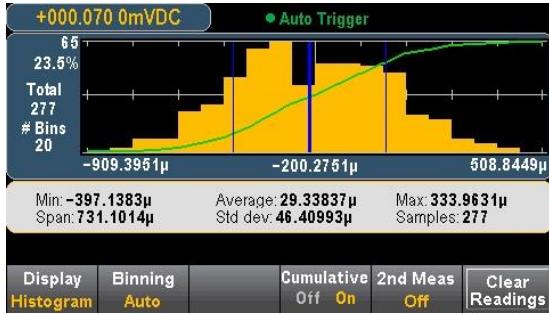

## 4.3 inch color LCD color

## Front and back 2 sets of multimeter input

## Histogram with statistic information

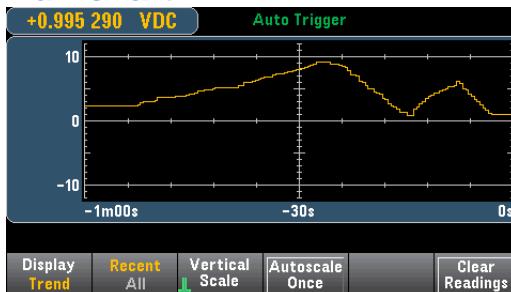

## Histogram with run chart

## Real 6 1/2 bit reading resolution

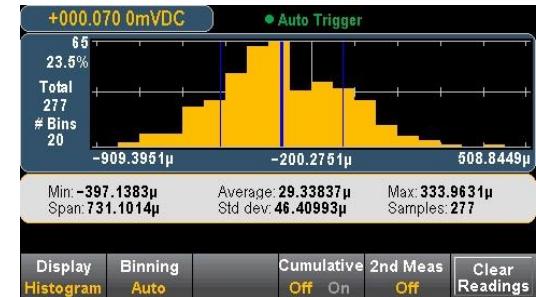

## Run chart

## Math statistic function

## Histogram with statistic information

## Bar table

## Dual display function

## Hold measure function

## Product types choosing

Model	HDM3065H	HDM3065B	HDM3065A	HDM3065S	HDM3065
Resolution bit	6 1/2	6 1/2	6 1/2	6 1/2	6 1/2
DCV basic precision	35 ppm				
Maximum reading rate	30,000 rdgs/s				
Memory	10,000 readings

1. For DC:technical indicators are valid after 60 minutes of preheating, set to 10 or 100NPLC in the integral period, and enable automatic zero setting. For AC:technical indicators are effective when preheating for 60 minutes, using slow ac filter and sine wave

2. All ranges have 20% overrange except for 1,000DCV、750ACV、10ADC、3AAC、10AAC and diode testing.

3.Relative to the calibration standard

4.Outside of the range of  $T_{CAL}\pm 5^{\circ}C$ ,each degree ( $^{\circ}C$ ) increases a coefficient.

5.Techical indicators arei valid when sinusoidal wave is input >1.5% range and >1mVrms The 750ACV range is limited to  $8\times 10^7$ v·hz.

6.Low frequency performance:three filter Settings are provided:3Hz、20Hz、200Hz.The frequency beyond the filter setting has been specified, no additional errors will occur.

7.Techical indicators are suitable for 4 lines or 2 lines measurement (peration bias returns to zero) resistance measurement.If there is no mathematical null, 2 lines resistance measurement will increase 0.2  $\Omega$  additional error.

8.The 10A range is provided on the front connector only.Each amplifier adds a 2mA base current value, or input current >5Arms.

9.Techical indicators are valid when sine wave is input >1.5% range and >10 $\mu$ AAC. 10.Techical indicators are suitable for the voltage measured at the input end.1mA test current is typical.The change of current source will lead to the change of voltage drop of diode junction

11.The selected probe limits the actual measuring range and measurement errors.Probe accuracy has included all measurement and ITS-90 temperature conversion errors.PT100Ro can be set to  $100\Omega\pm 5\Omega$ , to eliminate the original probe error.

12.Unless otherwise indicated, the technical indicators are valid after 60 minutes of warm-up and with sinusoidal input.Techical indicators are suitable for 1s gate time.(7 bits)

13.Suitable for sinusoidal and square wave input  $\geq 100$ mV.For 10mV to 100mV inputs, multiply the reading error % by 10.

14.The range is 10% to 120% below 750ACV.

15.The square wave input is specified as 10Hz-300kHz
